

## Corrugated Roof Installation

Gumleaf Gutter Protection is one of the leading companies in New Zealand

### Corrugated Roof Installation

*Our process for measuring your Gutter*

- ✓ Step 1: We measure the length of the guttering and add 5-10% for overlap and wastage.
- ✓ Step 2: Advice is offered to help you decide on which colour you will need from the colourbond and COLORSTEEL® range of colours (Please note: this is important for steel roofs as it will be seen).
- ✓ Step 3: We cover any questions you may have, then we offer a no-obligation quote.
- ✓ Step 4: On acceptance of our quote, we work on a 7 to 10 day period to begin your guttering installation. Completion of the installation is usually one to two days, dependent on the size of your home or business premise.

### Installation of Gutterguard

*Our process for Corrugated Roof Gutterguard*

#### Step 1

- ✓ Our Installer cleans out the gutters and flushes the down-pipes.

#### Step 2

- ✓ Then we fold the scallops of gutter guard down about 30 degrees with thumb and forefinger, and then lay in place, ensuring that the scallop fits nicely in the corrugation on the roof.

#### Step 3

- ✓ We secure to the lip of guttering with self-tapping screws, approximately 300mm apart.

#### Step 4

- ✓ Our installer places along the scalloped edge, screws on every 2nd corrugation rise aligned with the existing roof screws.

#### Step 5

- ✓ Each piece of Gutter Guard is interlocked where they overlap.

#### Step 6

- ✓ We then run guard over the hip and cut and screw to fit neatly.

#### Step 7

- ✓ Last but not least, we apply a thin bead of silicone along the scalloped edge of the Gutter Protection eliminating any small gaps.

#### Step 8

- ✓ Stand back and admire your professionally installed Gumleaf Gutter Protection.
